A. How will you achieve this in AI?

We can track a certain set of parameters for each employee's workflow such as working hour login per day, productivity percentages, number of days of leave taken each month, etc.

B. 3 stage of problem identification?

Stage- 1 – Machine learning.
Stage- 2 – Supervised
Stage-3 – Classification (Resign or not resign)

C. Name of the project

Employee's Attrition Prediction (EAP)

D. Create the dummy dataset

Name	Total working hours / month (192)	Leave taken / month	Productivity %	Chances of resigning (output)
Ashok	175	2	90	No
Daniel	120	8	55	Yes
Imran khan	182	1	95	No
